ABSTRACT

High performance liquid chromatography is at present one of the most sophisticated tool of the analysis. The estimation of Saxagliptin and Dapagliflozin was done by RP-HPLC. The Phosphate buffer was p^H 3.0 and the mobile phase was optimized with consists of Methanol: Phosphate buffer mixed in the ratio of 70:30 % v/ v. Inertsil C_{18} column C18 (4.6 x 150mm, 5µm) or equivalent chemically bonded to porous silica particles was used as stationary phase. The detection was carried out using UV detector at 260 nm. The solutions were chromatographed at a constant flow rate of 0.8 ml/min. the linearity range of Saxagliptin and Dapagliflozin were found to be from 100-500 mg/ml of Saxagliptin and 1-5mg/ml of Dapagliflozin. Linear regression coefficient was not more than 0.999.The values of % RSD are less than 2% indicating accuracy and precision of the method. The percentage recovery varies from 98-102% of Saxagliptin and Dapagliflozin. LOD and LOQ were found to be within limit. The results obtained on the validation parameters met ICH and USP requirements .it inferred the method found to be simple, accurate, precise and linear. The method was found to be having suitable application in routine laboratory analysis with high degree of accuracy and precision.

Keywords: Inertsil C18, Saxagliptin and Dapagliflozin, RP-HPLC

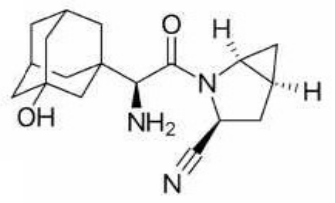
CONTENTS

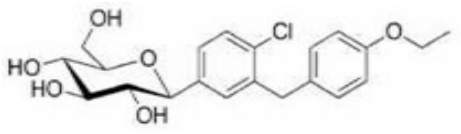
1. Introduction

Saxagliptin, sold under the brand name Onglyza, is an oral hypoglycemic (anti-diabetic drug) of the dipeptidyl peptidase-4 (DPP-4) inhibitor class. Early development was solely by Bristol- Myers Squibb; in 2007 AstraZeneca joined with Bristol-Myers Squibb to co-develop the final compound and collaborate on the marketing of the drug.



Saxagliptin

Dapagliflozin inhibits subtype 2 of the sodium-glucose transport proteins (Sresponsible for at least 90% of the glucose reabsorption in the kidney. Blocking this transporter mechanism causes blood glucose to be eliminated through the urine. In clinical trials, dapagliflozin lowered HbA_{1c} by 0.6 versus placebo percentage points when added to Metformin.



Dapagliflozin

2. Materials and Method

HPLC WATERS, software: Empower, 2695 separation module, PDA detector. UV/VIS spectrophotometer LABINDIA, UV 3000^{+}pH meter, weighing machine. Saxagliptin and Dapagliflozin, KH_2PO_4, Water and Methanol for HPLC, Acetonitrile for HPLC, Ortho phosphoric Acid.

Table 1: Chromatographic condition

Parameters	Description
Flow rate	1ml min^{-1}
Column	kromosil C_{18} Column (250mm x 4.6mm)5µg.
Mobile Phase	Phosphate buffer: Methanol P^{H} 4.5(20:80 v/v)
Buffer	Potassium dihydrogen orthophosphate PH 4.5 adjusted with Orthophosphoric acid
Detector	PDA
Column temperature	Ambient
Type of elution	Isocratic
Wavelength	254 nm
Injection volume	20µl
Run time	10min

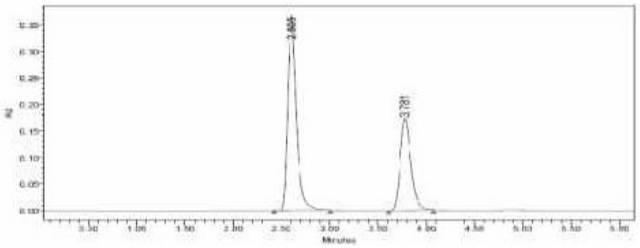


Fig.no.1. Chromatogram of Trail-6

Observation: The separation of two analytical peaks was good. The plate count also above 2000, tailing factor below 2, and the resolution is above 2. The condition is taken as optimized method.

Standard Solution Preparation:

Accurately weigh and transfer 10 mg of Saxagliptin and Dapagliflozin 10mg of working standard into a 10mL& 100ml clean dry volumetric flask add about 7mL of Diluent and sonicate to dissolve it completely and make volume up to the mark with the same solvent.

(Stock solution)

Further pipette 3ml& 0.3ml of the above stock solutions into a 10ml volumetric flask and dilute up to the mark with diluent.

Sample Solution Preparation:

Accurately weigh 10 tablets crush in mortor and pestle and transfer equivalent to 10 mg of Saxagliptin and Dapagliflozin (marketed formulation) sample into a 10mL clean dry volumetric flask add about 7mL of Diluent and sonicate to dissolve it completely and make volume up to the mark with the same solvent.

(Stock solution)

Further pipette 3 ml of Saxagliptin e and Dapagliflozin of the above stock solution into a 10ml volumetric flask and dilute up to the mark with diluent.

Method Validation Precision:

Accurately weigh and transfer 25 mg of Saxagliptin and Dapagliflozin working standard into a 10mL clean dry volumetric flask add about 7mL of Diluent and sonicate to dissolve it completely and make volume up to the mark with the same solvent.

Intermediate Precision/Ruggedness:

To evaluate the intermediate precision (also known as Ruggedness) of the method, Precision was performed on different day by using different make column of same dimensions.

Accuracy: Accurately weigh and transfer 10 mg of Saxagliptin and Dapagliflozin 10mg of working standard into a 10mL& 100ml clean dry volumetric flask add about 7mL of Diluent and sonicate to dissolve it completely and make volume up to the mark with the same solvent.

Linearity: Accurately weigh 10 tablets crush in mortor and pestle and transfer equivalent to 10 mg of Saxagliptin and Dapagliflozin (marketed formulation) sample into a 10mL clean dry volumetric flask add about 7mL of Diluent and

sonicate to dissolve it completely and make volume up to the mark with the same solvent.

Limit of Detection: Accurately weigh and transfer 10 mg of Saxagliptin working standard into a 10mL clean dry volumetric flask add about 7mL of Diluent and sonicate to dissolve it completely and make volume up to the mark with the same solvent.

Limit of Quantification: Accurately weigh and transfer 10 mg of Saxagliptin working standard into a 10mL clean dry volumetric flask add about 7mL of Diluent and sonicate to dissolve it completely and make volume up to the mark with the same solvent.

Limit of Detection: (for Dapagliflozin) accurately weigh and transfer 10mg of Dapagliflozin working standard into a 100ml clean dry volumetric flask add about 7mL of Diluent and sonicate to dissolve it completely and make volume up to the mark with the same solvent.

Limit of Quantification: (for Dapagliflozin)

Accurately weigh and transfer 10mg of Dapagliflozin working standard into a 100mL clean dry volumetric flask add about 7mL of Diluent and sonicate to dissolve it completely and make volume up to the mark with the same solvent.

Robustness:

As part of the Robustness, deliberate change in the Flow rate, Mobile Phase composition, Temperature Variation was made to evaluate the impact on the method.

3. Results and Discussion
